

tz-brake shoe two-part design

Installation

To replace the brake shoes or the brake lining support, the instructions in the installation and operating manual of the associated tz-brake must be complied with.

Removal of the old brake shoes

see installation and Operating Manual of the associated tz-brake

Installation of the brake shoe two-part design

The brake shoe, complete two-part design is delivered by tz fully assembled, and is attached to the brake caliper with a new clamping pin of dimensions 10 x 120 mm (see associated installation and operating manual of the tz-brake).

Replacing the brake lining supports, complete design

When replacing the brake lining supports, complete design (item 1), the screws (item 3) and Nord-Lock washers (item 4) are removed. The new brake lining supports, complete design (item 1) including screws (item 3) and Nord-Lock washers (item 4) must be attached to the lining support receiver (item 2) and screwed into position.

ATTENTION!

Tighten the screws (item 3) with a torque of 27 Nm.

Only use the M8x20 cheese head screws with micro-encapsulated glue "Precote 80" (item 3) plus Nord-Lock washer DNL8 (item 4) supplied by tz. Longer cheese head screws are not permitted. The Nord-Lock washers (item 4) must only be used in pairs in the specified arrangement. Ensure that the contact surfaces are free of paint, dirt, rust or other deposits.
